Summary

- More than 15 years of experience creating scalable full-stack applications with passion.
- Focused on AI agent integration, speed improvements and designing products that put users first.
- Excellent problem-solver . Team player with experience managing cross-functional groups.

Work Experiences

Software Architect | Project Manager | VortexAI Turkey | 06/2025 – 07/2026

- Designed the whole system architecture of an AI-powered SaaS platform that helps insurance agencies with policy quoting and sales and led the development team to finish the project.
- Created browser servers with Playwright to collect insurance quotes from provider dashboards.
Managed CPU/RAM usage, proxy services, and stealth to escape bot detection
- Created AI agents that automatically get quotes from insurance websites using browser automation built on a queue-based (BullMQ/Redis) multi-process worker setup (API, gateway, workers, router).
- Developed an AI-driven WhatsApp messaging agent to manage customer communication, plus self-running background tasks like integration health checks.
- Created the platform structure: Laravel API; managed a complex relational database with Laravel. Created microservices with [NodeJS](#).
- Managed the engineering team: handled the plan, code reviews, task planning and production operations (deployments, monitoring, incident response).

Senior Full-Stack Web Developer | BeScreen | Turkey | 06/2024 – 07/2025

- Developed a digital signage SaaS platform with built-in design tools (similar to Canva) making it faster for clients to get started by 25%.
- Built a Vue3 dashboard and a Laravel backend ensuring the system can grow and stay easy to maintain.
- Added an AI Agent for WhatsApp-based screen management, which cut customer support requests by 35%.
- Boosted system efficiency and user satisfaction by improving API integrations and conducting code reviews aligned with best practices..

Senior Full-Stack Web Developer | LikyaPix | Turkey | 06/2015 – 06/2024

- Led the creation of tourism and villa rental platforms using Vue.js NuxtJS (SSR) and Laravel making website load times 40% faster and increasing booking rates by 20%.
- Used Git-based workflows to make working with distributed teams easier cutting deployment mistakes by 30%.
- Connected third-party APIs (payment, booking, maps) to make the system more powerful and easier to use.
- Improved databases and query setups which made page response times about 50% faster.

Education

B.Sc. Mathematics OHD University | Turkey

Professional Certificate, Data Science | Harvard University | 2019 – 2020

Skills

AI: Context engineering, Loop engineering Agentic automation design, AI Agent Frameworks (LangGraph, LangChain, Mastra)

Languages: JavaScript, PHP, Python, HTML, CSS, TypeScript, SQL

Frameworks: Vue, NuxtJS, Laravel, NextJS, React, NodeJS

Databases: MySQL, MongoDB

Languages

Turkish. Native

English. C1

French. A2
